SAR

The maximum results of Specific Absorption Rate (SAR) found during testing for X67 5G are as follows.

Max SAR Value(W/kg)			
RF Exposure Conditions	10-g Head	10-g Body (Separation distance of 5mm)	10-g Member DAS (See note3) (Separation distance of 0mm)
	0.124	0.819	1.403
Max Simultaneous Tx	0.211	0.935	1.639

This device is in compliance with Specific Absorption Rate (SAR) for general population/uncontrolled exposure limits (2.0 W/kg for head and body, 4.0 W/kg for member) specified in COUNCIL RECOMMENDATION 1999/519/EC.

PACKAGE CONTENTS

- 1x Phone
- 1x Type-C Cable
- 1x Power Adapter
- 1x Type C to 3.5mm Audio Adapter
- 1x Warranty Card
- 1x Quick Start Guide

1. Available storage and RAM are less than the total memory due to storage of the operating system and software pre-installed in the device. X67 5G does not support expansion SD card.
2. Charging rates are based upon the use of the included charger. Actual results may vary.
3. Size and weight vary by configuration and manufacturing process.
4. The camera software functions are subject to actual presence. Some functions and names may vary depending on the software version.
5. X67 5G is shockproof, water, and dust resistant and was tested under controlled laboratory conditions with a rating of IP68 under IEC standard 60529 (maximum depth of 1.5 meters up to 30 minutes). Charger and accessories are not water-resistant. Shockproof, water and dust resistance are not permanent and might decrease as a result of normal wear. Do not attempt to charge a wet X67 5G. Liquid damage not covered under warranty.
6. The support for 5G depends on the local carriers' network; when using two 5G SIM cards, only one of them supports 5G network standby, which can be selected at Network Settings.
7. Dual 4G SIM requires the support of local telecom operator services and may not be available in all regions.
8. Only certain regions and telecom operators support VoLTE.
